Design Cycling Copenhagen

The design uses all positive aspects of modern technique but at the same time is a simple design. It's very user-friendly and very sustainable. Our idea is to make the world simpler for everyone.

The concept consists of mobile units, in which bicycles are stored compactly. The units, equipped with a pay/registration panel, are completely self-supporting, energy wise. Therefore they are ecological and flexible in use. Location and amounts can be varied rapidly. Re-distribution can be executed easily. Bicycles are well protected from vandalism, theft and influence of the weather.
